Berlin Group NextGenPSD2

Changelog

PSD2 Compliance Berlin Group - Changelog 1.12.4

Introduction

The updated version published is following the international Berlin Group NextGenPSD2 standard, version 1.3. Please note that the version in the URL will not change, the "v1" will be kept in all existing URLs.

Support of RSASSA-PSS signature scheme for request signature

In this release we have provided support for **RSASSA-PSS** signature scheme using SHA512 as hash algorithm and MGF1 (with SHA512) as mask generation function i.e., "SHA512withRSAandMGF1"

Now TPP can use **SHA512withRSAandMGF1** algorithm in request signature header if **RSASSA_PSS** signature algorithm is used in QSeal certificate

> **Note**: Supported signature algorithms are: rsa-sha256, rsa-sha512, SHA512withRSAandMGF1.

Adaptation of payment product `Target-2-payments` for both payments and periodic-payments services

We have provided the support for **target-2-payments** product for both payments and periodic-payments services.
